

Name: Samarpita Roy

Department: Metallurgy and Materials Engineering

Email: [samarpitaroy89@gmail.com](mailto:samarpitaroy89@gmail.com)

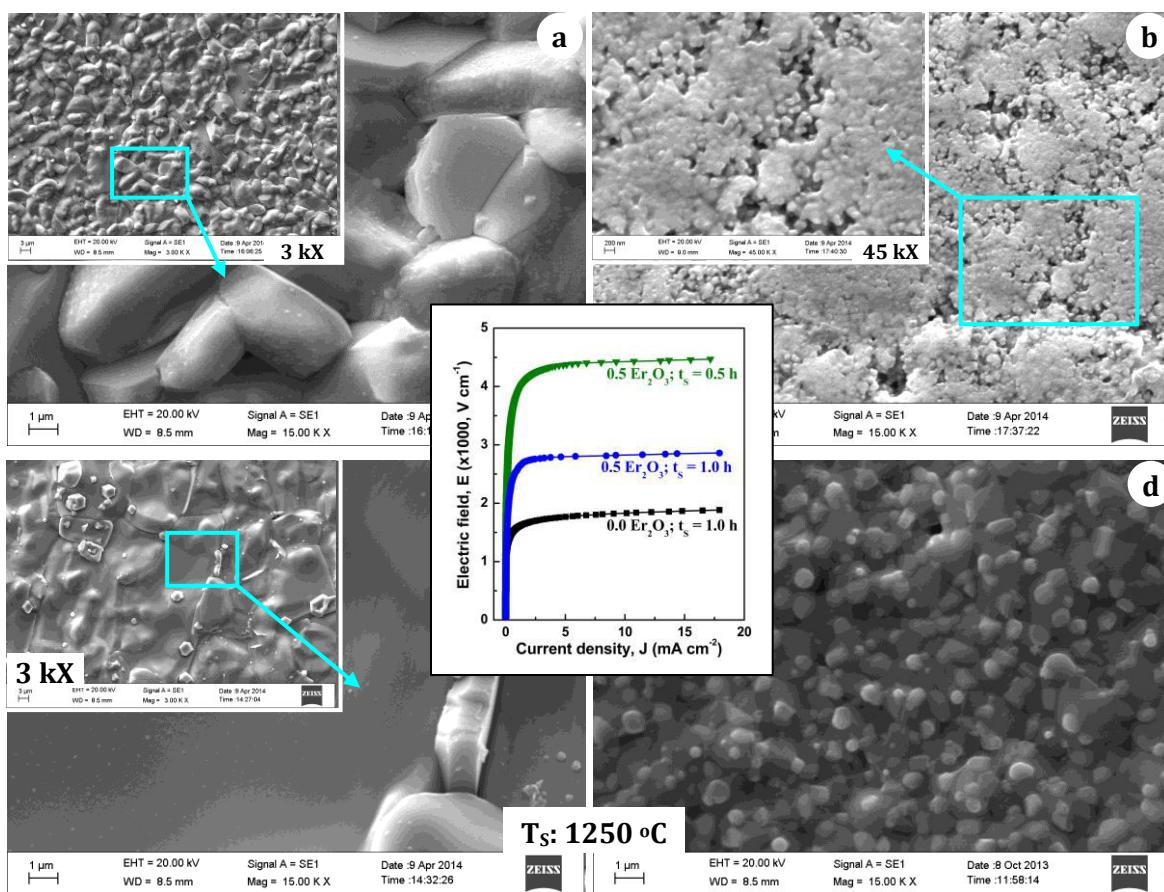

Research Area :

### Processing-Microstructure-Property Relationships of Er<sub>2</sub>O<sub>3</sub> added ZnO Based Varistors

#### Highlights of Research:

- Develops high performance ZnO based varistor by grain refinement
- Establishes the process-microstructure-property of rare earth modified varistor
- Demonstrated that small amount of Er<sub>2</sub>O<sub>3</sub> addition reduces the grain size by over an order of magnitude
- Aims to achieve comprehensive understanding related to the role of grain size of ZnO on electrical and Fracture toughness
